

**What nature damaged,  
Termidor treatments restore**

**Termidor®** Restoration,  
for 100% termite protection

**TERMIDOR®**  
Termiticide

## After the flood, restore your home's termite protection with Termidor® Restoration.

For years, your home has been protected by your original Termidor treatment. If severe storms have affected your termite protection, Termidor Restoration can fully restore protection and preserve your biggest investment. Vulnerable areas that are adjacent to your home will need retreatment.

an average of  
**25 termite colonies**  
may be present  
per acre

### Termites: a constant threat

Termite colonies may contain millions of termites, but they can go undetected until they've seriously damaged your home.

The risk of termite infestations is constant. In residential areas of the U.S. where

termite pressure is high, research shows an average of 25 termite colonies may be present per acre.<sup>1</sup>

### Challenging to control

Genetic analysis reveals that when one termite colony is eliminated from an area, another colony commonly moves into that same area to fill the vacated niche.<sup>2</sup>

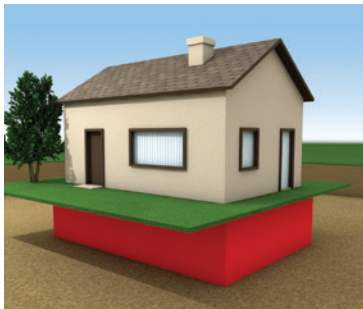

eliminate one colony and  
**another takes**  
**its place**

## What happens when your treated zone is disrupted?

Studies show termites are primarily active in the top 12 inches of soil.<sup>3</sup> This is also the area where soil disruptions most often occur, which may make a **Termidor**® Restoration treatment necessary.

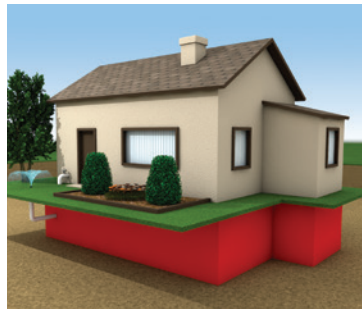

Your original **Termidor** treatment provided a continuous zone of protection.

*Illustrations are not to scale.*

Severe floods and other changes around your home can disrupt your protection.

**Termidor** Restoration restores the protection around your home.

Typical activities that affect the top 12 inches of soil immediately around the foundation of your home include:

- Heavy storm runoff with soil erosion
- Adding or moving landscaping
- Animals digging along foundation
- Structural additions to the home
- Irrigation additions or repairs
- Utility line additions or repairs
- Foundation repairs

## Ask for Termidor® termiticide, the top name in termite control.

### The #1 liquid termiticide in the country

With more than 20 years of research and 16 years of market performance, **Termidor** termiticide is the most trusted name in termite control. Relied on by pest professionals for proven performance, it features the most effective termite-control technology and application methods available.

### A proven solution: genuine Transfer Effect technology

Termites cannot see or taste **Termidor** termiticide's non-repellent formulation. Via social contact, they unknowingly transfer the termiticide to other termites, eliminating termites from the structure.

### Termite protection with your family and pets in mind

**Termidor** termiticide uses the same active ingredient found in the #1 veterinarian-recommended flea and tick protection for dogs and cats. It's virtually odor-free, so it won't cause any disruption to your family's normal routine.

Always read and follow label directions.
